Job Application for Software Engineer

Dear Hiring Team,

About Me

I am writing to pursue a possible software engineering position with IBM. I am interested in any position that will put my software engineering skills to good use.

Having recently completed my Bachelor's degree at UMSL, I have experience writing and testing code in a number of languages such as C/C++, Java and Javascript. I have developed in a number of environments, including Linux, Windows and Mac OS. I have many tools, such as those offered by Eclipse, and have an understanding of relational databases (and the languages that govern them, such as SQL). I enjoyed using and sharpening these skills, as well as working as part of Agile development teams, and believe this opportunity will allow me to continue doing so in a professional capacity.

Why IBM?

As a recent computer science graduate with a passion for technology, IBM, seems like a perfect fit for me. The company's history as being an industry leader and household name appeal to me greatly. Watching IBM's Watson perform on jeopardy so many years ago was inspiring, and I would love the chance to contribute to such a company with my own set of skills!

Why Me?

I am a skilled developer eager with many talents that would be useful for this position, and a strong willingness to learn besides. Attached is my resume. Please call me at (206) 697-0392 with any questions you may have about me or my abilities. I look forward to your response!

Sincerely,

Dillon J. Belton
