Job Application for Software Engineer

Dear Hiring Team,

About Me

I am writing to pursue a possible software engineering position with Intel. I am interested in any position that will put my software engineering skills to good use.

Having recently completed my Bachelor's degree at UMSL, I have experience writing and testing code in a number of languages such as Javascript, Java and C++. I have developed in a number of environments, including Linux, Windows and Mac OS and I have used many tools, such as those offered by Git and Eclipse. I enjoyed using and sharpening these skills, as well as working as part of Agile development teams, and believe this opportunity will allow me to continue doing so in a professional capacity.

Why Intel?

As a recent computer science graduate with a passion for software development, Intel, seems like a perfect fit for me. I have always been a fan of Intel's products growing up, and so the opportunity to go from a mere consumer to an employee of this prestigious company appeals to me greatly. I would love to contribute to the Intel's continued success with my own set of skills!

Why Me?

I am a skilled developer eager with many talents that would be useful for this position, and a strong willingness to learn besides. Attached is my resume. Please call me at (206) 697-0392 with any questions you may have about me or my abilities. I look forward to your response!

Sincerely,

Dillon J. Belton
